

3/2/00 op #'s DH 498, TF 751, BK 720

Test: Covered CS electrodes for  
chronic<sup>19</sup> animal study - Gore lot #000630/

- wrapped 20 times with F4 roll 8A Batch #  
SK/F4004 (17 electrodes)
- used a mandrel ~ 18" to slide electrode  
on
- using Gore-tex CV 7 suture, slide suture  
between filars to mask .180" from end  
of coil per spec drawing on page 51 (2" electrode)
- after wrapping remove suture by pulling on  
one end
- sintered @ 370°C in large clean room,  
using wire down lumen of electrode and hang  
on shelf rack oven # 7399 for 10'
- PVA'd on 3/3/00 per page 51 of this lab book  
15% IPA, 70% PVA, 20% DI RiaSE, 1% Glutar/HCL, 2% DI Ria  
2% (10,10) 1% (20,20,80)  
sterile H<sub>2</sub>O  
Used for all
- DI H<sub>2</sub>O used

Gelatin lot # 242 8A54  
HCL lot # 2062 KU/H  
PVA lot # MC 0131

1 500 ml batch of PVA made on 2/8/00 used three times in clean room  
200 ml's 5 DSP from page 51  
1 500 ml batch of PVA made fresh for page 51 (made on 2/25/00) used once for  
page 51 in clean room

3 covered coils were retained. 1 coil was  
dirty prior to PVA treatment, 2 coils PVA not  
PVA treated and 2 coils were PVA treated.

- retain attached LEAD # 7109104572 sent back from  
after manufacturing
